What are the biggest improvements between 8i and Essentials?

"It's clean, intuitive and concise. There is a natural flow to the data management process. Essentials is a huge improvement over 8i. The ability to add pictures to our tasks/procedures is greatly improving the quality and thoroughness of our preventative and corrective maintenance. The new interface is reducing administrative steps for our system manager and cascading data feature makes it much quicker to move from asset to relational data when updating records.

Hats off to the design and development team!"
